

## Databases in the twinkling of an eye!

The TvdAdmin offers the DBA a tool for efficiently creating and deleting Oracle databases on Unix and Windows systems. Unlike other tools, TvdAdmin is a lean, configurable script generator.

The supplied templates and configuration files contain valuable know-how from the practical experience of the Trivadis consultants, who use the tool themselves. The package itself is continuously updated and adapted to new Oracle versions through the input of the consultants as well as the customers.

### More than a database

The easiest and quickest way to create a database is to invoke it. After this, you will be guided through the creation process of the database using tried and tested default values.

Create scripts (for the database and the directory structure) are generated as a result and can be edited before the actual database creation, if necessary. Thus the redo logs (number and size) or the tablespaces (size, name, dictionary managed, locally managed, etc.) can be customized quickly and easily. If several databases have to be created in a similar way, one can work with a config file and the batch-mode.

### Less than a database

The complete deleting of a database often means tedious busywork. TvdAdmin automates this process for the database files, the directory structure as well as other involved configuration files.

### Source code available

TvdAdmin is delivered in source code. We can perform any necessary adaptation to your environment. You also have the option of doing this according to your own preferences and your company's in-house guidelines.

### Practice-oriented

TvdAdmin has been designed by people working with the tool for those who will be using it. We use the tool for our own databases and with many of our customers within the scope of SLAs. This best ensures that our products are up-to-date and robust.

### Availability

TvdAdmin is available on all current Unix and Windows platforms and is verified against Oracle 9i Release 2 and later. The license-free TvdBasEnv from version 2.5.0 or later is a prerequisite. Support on older Versions is available upon request.

### Conditions

**Delivery** TvdAdmin is installed and configured on your system by a Trivadis consultant (cost based on time needed).

**Licenses** An individual license (per server) costs CHF 3'500.- / EUR 2'200.- (plus VAT; multiple licenses upon request).

**Upgrade rights** 15% of license fees (plus VAT) per year.
