

TvdBasEnv

trivadis
makes IT easier. ■ ■ ■

A well-founded basis for Oracle and MySQL!

TvdBasEnv standardizes and simplifies environment handling in the online and batch mode. It contains a package of sophisticated report and start/stop scripts. TvdBasEnv is absolutely essential for Trivadis packages, but also very useful without them (administration, development of KSH and PERL scripts).

Flexible environment handling

TvdBasEnv allows the quick switching from one environment to another, independently of the number of software releases and databases on the server. TvdBasEnv is also able to carry out certain environment adaptations such as library paths, variables, etc. – individually and incrementally.

Platform independence

TvdBasEnv is written in PERL and thus portable. The PERL interpreter is delivered for the respective OS together with the necessary PERL libraries, thus considerably simplifying installation. There is full support for 32- and 64-bit environments.

Flexible and individual

TvdBasEnv is easy to install with an efficient installer. If an OFA (Optimal Flexible Architecture) environment is concerned, TvdBasEnv can be run without any additional configuration. Otherwise, the necessary settings will be pointed out. These can easily be carried out via configuration files.

Standard Oracle environment

TvdBasEnv defines a minimal environment for each database environment to provide for a configuration-free job. In addition, a list of variables can be defined. These will be set, deleted, or upgraded while working in a particular environment.

Alias definitions

Established command aliases are predefined or automatically generated. These facilitate the navigation and execution of frequently used commands.

Start/stop scripts and logging

For all important database services start/stop scripts are available for the integration into the system boot process to log the performed actions. These scripts can parallelize actions, handle timeouts, process different startup modes and execute callbacks.

Source code available

TvdBasEnv is delivered in source code. We can perform any necessary adaptation to your environment. You also have the option of doing this according to your own preferences and your company's in-house guidelines.

Practice-oriented

TvdBasEnv has been designed by people working with the tool for those who will be using it. We use the tool for our own systems and with many of our customers within the scope of SLAs. This best ensures that our products are up-to-date and robust.

Availability

TvdBasEnv is available on all current Unix and Windows platforms and is verified against Oracle RDBMS 8.1.7 and later. Support on older Versions is available upon request.

Conditions

Delivery TvdBasEnv is installed and configured on your system by a Trivadis consultant (cost based on time needed). Further installations by users themselves.

Licenses No license fees.

Upgrade Rights Where required, a Trivadis consultant will install a new version, on one server initially (cost based on time needed).
