

TVD-Standby™

Disaster recovery solution for Oracle Standard Edition.

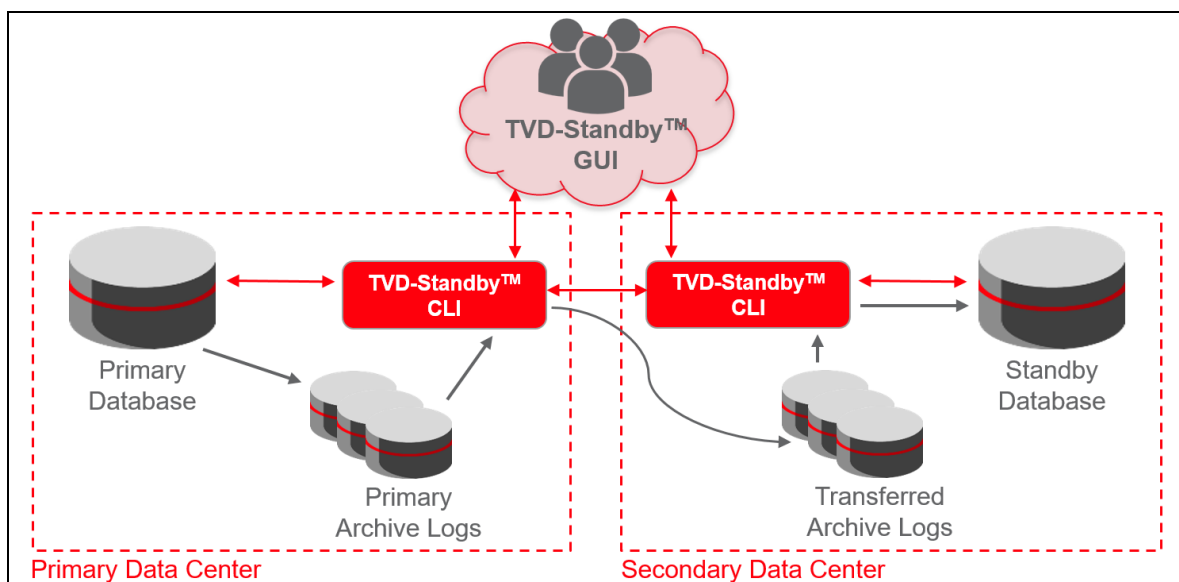

THE SOLUTION AT A GLANCE

IT failures and data loss are a nightmare for businesses and cause massive costs, which in extreme cases will threaten the very existence of your enterprise. These risks have to be minimized. Adequate availability of the data and a good service for the end customer are the decisive factors in achieving this.

And that is what Trivadis can offer you! You have already lowered your Oracle **license costs** by more than 50 percent with the **Standard Edition**, but even so you don't want to forgo comprehensive protection against failure and data loss? Our solution **TVD-Standby™** is the answer! Thanks to TVD-Standby™, your Standard Edition databases will be safe from major threats without you having to upgrade to the expensive Enterprise Edition with the Data Guard option.

TVD-Standby™ is not a proprietary implementation, but utilizes the integral basic features of Oracle and links them to a user-friendly overall solution via the command line or a graphical interface. With the mouse, you open one of your Standby databases for reporting purposes, for instance, while a second Standby database is automatically synchronized in the background with the changes made to the active database. The web-based interface allows for centralized administration of multiple Standby environments.

TVD-Standby™ architecture

WHAT WE OFFER

Our consultants install and configure TVD-Standby™ on your system and conduct the initial failover tests (charges depending on the time and effort involved).

One license is required per server pair with a primary and Standby database. The number of databases on the server pair is irrelevant.

YOUR BENEFITS

- Risk minimization due to data and service high availability
- Massive cost savings with Oracle Standard Edition
- High security of investment thanks to the utilization of standard Oracle functions
- Seamless support on any platform for Oracle functions such as RAC and ASM
- Lean solution with a user-friendly web interface
- Monitoring and alerts in error situations
- Cloud compatibility
